3 Things CISOs Can Immediately Do with Cato

Wherever you are in your [SASE](#) or [SSE](#) journey, it can be helpful knowing what other CISOs are doing once they've implemented these platforms. Getting started with enhanced security is a lot easier than you might think. With Cato's security services being delivered from a scalable cloud-native architecture at multiple global points of presence, the value is immediate.

Ihttps://www.catonetworks.com/blog/3-things-cisos-can-immediately-do-with-cato/

In this blog post, we bring the top three things you, as a CISO, can do with Cato. From visibility to real-time security to data sovereignty, Cato makes it easy to create consistent policies, enable [zero trust network access](#), and investigate security and networking issues all in one place.

To read more details about each of these steps, understand the inner workings of Cato's SASE/SSE and to see what you would be able to view in Cato's dashboards, you can read the ebook "The First 3 Things CISOs Do When Starting to Use Cato", which this blog post is based on, [here](#).

Now let's dive into the top three capabilities and enhancements CISOs gain from Cato:

-
